CORE COMPETENCIES

- Generative AI & LLM Solutions
- Agentic AI & Multi-Agent Systems
- Retrieval-Augmented Generation (RAG)
- AI Application Development & API Engineering
- LLMOps, Model Integration & AI Deployment
- Data Analytics & Business Intelligence
- Enterprise Data Engineering & ETL
- Microsoft Fabric & Modern Data Platforms
- AI Workflow Orchestration & Automation
- Stakeholder Collaboration & Delivery

TECHNICAL SKILLS

- Programming:** Python, SQL
- AI & LLM Frameworks:** LangChain, LangGraph, ChromaDB, Microsoft Agent Framework (MAF), Hugging Face Transformers
- LLM Platforms & APIs:** OpenAI GPT, Claude, Azure OpenAI, Azure AI Foundry
- Backend & App Dev:** FastAPI, Pydantic, SQLite, Server-Sent Events (SSE)
- Frontend & Viz:** React, Recharts, Streamlit
- Data & Analytics:** DAX, Power Query, Sempy, Pandas, Polars, Scikit-learn
- Cloud & Data Platforms:** Microsoft Fabric (Lakehouse, Warehouse, Direct Lake), Databricks, Microsoft Azure
- Automation:** Copilot Studio, Power Automate
- DevOps & Monitoring:** Docker, Langfuse, Git, Azure DevOps

EDUCATION

Bachelor of Engineering (B.E.)

Dayananda Sagar College of Engineering, Bangalore | 2022

CERTIFICATIONS

- Microsoft Fabric Analytics Engineer (DP-600)
- Academy Accreditation – Gen AI Fundamentals (Databricks)
- Developing CI/CD Solutions with Azure DevOps
- Power BI Data Modeling with DAX
- HarvardX CS50: Introduction to Programming with Python

AKANSH SHARMA

AI Engineer · Full-Stack AI & Analytics

PROFILE SUMMARY

- AI Engineer with 3.75 years at Bosch, transitioning from enterprise BI into full-stack AI engineering — building end-to-end AI systems spanning data layers, RAG pipelines, multi-agent orchestration, and the APIs and frontends that surface them.
- Shipped production AI at enterprise scale: a full-stack agentic system automating financial reporting across 95 controllers and 11 countries, and a deployed RAG pipeline distributing AI-curated newsletters company-wide.
- Strong data engineering foundation (Microsoft Fabric, Power BI, SQL, Python) bridged into modern AI — LangChain/LangGraph, Microsoft Agent Framework, vector retrieval, and LLMOps practices (Langfuse, Docker).

WORK EXPERIENCE

AI Engineer / Sr. Data Analyst | Bosch Global Software Technologies Ltd. | Bangalore

Jan 2024 – Present

- Built **Touchless Reporting**, an agentic AI system that automated MBR creation for **95 controllers across 15 legal entities and 11 countries** - leveraging Python, FastAPI, Microsoft Agent Framework, Azure-hosted LLMs, and React (*production data sourced from the team's Redmesh modeling layer; SQLite used for the development prototype*).
- Built a FastAPI-based enterprise data layer with Pydantic validation and real-time SSE streaming, enabling consolidated financial reporting across sectors, geographies, divisions, and multi-currency planning scenarios.
- Designed and built a multi-agent AI framework that orchestrates specialized data, sanity-check, and narrative agents in sequence - using function-calling tools to power anomaly detection, financial sanity checks, AI-generated variance commentary, and natural-language data exploration.
- Led **AI Talent Flux**, an enterprise AI initiative using Microsoft Copilot Studio and Power Automate to automate skill mapping, mentorship matching, and learning recommendations, generating annual savings of **€25,434**.
- Developed an AI-powered news aggregator (LangChain, LangGraph, ChromaDB, GPT) that automates content curation, summarization, and company-wide newsletter distribution, built on an end-to-end RAG pipeline spanning semantic search, vector embeddings, retrieval, and LLM-powered generation.
- Migrated analytics solutions to Microsoft Fabric (Lakehouse, Warehouse, Direct Lake), delivering **2x faster query performance** and **40% reduction** in dashboard refresh times; implemented cache pre-warming in Fabric Notebooks to cut load times by a further **40%**.
- Built a GPT-powered DAX optimization framework that improved analyst productivity by **50%**, redesigned **10+ Power BI dashboards**, and engineered SQL-based ETL pipelines processing **5M+ records monthly**.

Cross-cutting work:

- Defined agent workflows, orchestration patterns, and prompt-engineering strategies for the systems above, collaborating with business stakeholders to turn high-value automation opportunities into working production applications.

Data Analyst | Bosch Global Software Technologies Ltd. | Bangalore

Oct 2022 – Jan 2024

- Developed and maintained Power BI dashboards supporting operational and IAM analytics across business functions.
- Built SQL-based ETL and data validation processes to improve reporting accuracy and data consistency.
- Created DAX measures and optimized semantic models to enhance KPI tracking and reporting performance.
- Automated recurring reporting activities, reducing manual effort and improving reporting efficiency.

KEY PROJECTS

LLMOps & Observability Framework

Python, Claude API, Langfuse, Docker

- Built a containerized LLM application instrumented end-to-end with Langfuse, tracking model latency, token utilization, and prompt-execution patterns to support monitoring and troubleshooting.
- Dockerized the stack for portability and reproducibility, establishing a foundation for production-grade LLMOps workflows.

Pandas vs Polars Benchmarking

Python, Pandas, Polars

- Benchmarked ingestion, joins, aggregations, and feature creation on large-scale datasets, showing Polars achieved **several-fold faster execution with lower memory usage**.
